

Vossloh Locomotives becomes Vossloh Rolling Stock

- The old-established company's rebranding includes a new logo, corporate design and website
- The company's new claim "Sustainability in motion" puts the emphasis on sustainable products and service processes throughout Europe

Kiel and Berlin, 20th of September, 2022. At the opening of the leading international trade fair for transport technology, InnoTrans 2022, Vossloh Locomotives is presenting itself to the public with a new name: Vossloh Rolling Stock. Along with the name change comes a completely new corporate image with a new logo, corporate design, new website www.vl-rs.com and the "Sustainability in motion" claim. The new brand identity is intended to reinforce the company's commitment to sustainable mobility.

"With the relaunch of our corporate brand we're honing our position in the market and underscoring our objective of collaborating with our customers on making the mobility of tomorrow sustainable", explains Dr. Bernd Hoppe, Executive Director and General Manager of Vossloh Rolling Stock. The services and products the company is presenting during the trade fair reflect its new sustainable brand identity. These include the four-axle, DE 18 mid-cab locomotive, which can operate emission-free in "zero-emission" areas to provide more than an hour of shunting operations. It's also the first time that Vossloh Rolling Stock is presenting its Modula hybrid locomotive to an international audience. Not only can this locomotive's hybrid set-up and equipment be freely selected to suit its area of use, it also accommodates the installation of future drive technologies, e.g. variants based on hydrogen. Future market requirements, such as Augmented Reality functionality for servicing, are already possible with the Modula.

The Europe-wide, ECM-compliant IMATEQ service network is also part of the Vossloh Rolling Stock group of companies. Here, "Sustainability in motion" stands for customized, integrated and particularly resource-efficient maintenance processes. In the course of renaming the company, the service center in Moers will be incorporated into the IMATEQ brand.

Vossloh Rolling Stock is looking to actively participate in shaping the mobility revolution of the future with its rapidly growing portfolio of products and services. This will be facilitated by the synergies and sharing of technical expertise between the German company and the world's largest manufacturer of rolling stock, the China Railway Rolling Stock Corporation Ltd. (CRRC). Vossloh Rolling Stock has belonged to that company's subsidiary, CRRC ZELC, since 2020.

About Vossloh Rolling Stock:

State-of-the-art, mid-cab locomotives from Vossloh Rolling Stock lead the way throughout Europe. Attributes such as economy, flexibility and environmental friendliness are the focus of this European market leader's development, design, production and service quality. Operators are also provided with comprehensive, demand-

oriented maintenance services through the company's own IMATEQ service network that operates throughout Europe. Having joined the group of companies under the umbrella of its new parent company CRRC ZELC in 2020, this old-established company is now beginning a new international chapter in its long history.
